

Web Programmer Job Description template

Web Programmer Job Description Template/Brief

We are looking for a skilled Web Programmer to join our development team. The Web Programmer will be responsible for building robust web applications and enhancing user experience. This role involves collaborating with designers and back-end developers to create seamless web experiences. The ideal candidate should have strong coding skills and a passion for web development.

Web Programmer Job Profile

A Web Programmer is responsible for developing and maintaining web applications and websites. They work closely with designers and back-end developers to implement user-friendly and efficient web interfaces. This position requires strong programming skills, attention to detail, and the ability to work collaboratively in a team environment.

Reports To

The Web Programmer reports to the Lead Web Developer or Head of Engineering.

Web Programmer Responsibilities

- Develop and maintain web applications using a variety of programming languages.
- Collaborate with designers to translate mockups into functional web pages.
- Ensure cross-browser compatibility and optimize web applications for speed and scalability.
- Implement responsive design principles to enhance user experience on all devices.
- Debug and troubleshoot issues to improve application performance.
- Participate in code reviews and provide feedback to peers.
- Stay updated with industry trends and emerging technologies.
- Work with back-end developers to integrate front-end features with server-side logic.

Web Programmer Requirements & Skills

- Proven experience as a Web Programmer or similar role.
- Proficiency in HTML, CSS, and JavaScript.
- Experience with front-end frameworks such as React, Angular, or Vue.js.
- Understanding of web development processes, including design, development, and deployment.
- Familiarity with version control systems like Git.
- Strong problem-solving skills and attention to detail.
- Good communication and teamwork abilities.
