Front End Developer Job Description template

Front End Developer Job Description Template/Brief

We're hiring a front-end web developer. Qualified candidates will require solid knowledge of HTML5, CSS, and JavaScript and a fundamental grasp of user interface and user experience (UI/UX) design. As a front-end developer, you will be in charge of our website's user interface.

Turning wireframes and mockups into reusable code and creating high-quality UI components with scalability in mind will be your responsibilities. You'll also be in charge of adding new features to our WordPress site, managing plugin integrations like WooCommerce, and making routine maintenance and performance improvements.

Front End Developer Job Profile

Front-end developers are in charge of the user-facing code on a website and the architecture of its immersive user experiences. Front-end developers must be fluent in three languages to achieve these goals: HTML, CSS, and Javascript programming.

In addition to these languages, front-end developers must be familiar with Bootstrap, Foundation, Backbone, AngularJS, ReactJS, and EmberJS, which ensure great-looking content on any device, and libraries such as jQuery and LESS, which package code into a more functional, time-saving form.

Front-end developers utilise these technologies in collaboration with designers or user experience analysts to move mockups, or wireframes, from development to delivery. Strong front-end developers may also detect particular user experience concerns and make ideas and defined solutions to impact the design.

Reports To

- Tech Lead
- Product Manager
- Chief Technology Officer

Front End Developer Responsibilities

- Collaborate closely with the design, product management, and development teams to produce attractive, usable, responsive, and engaging interfaces for a variety of devices
- Make UI/UX ideas into prototypes, establish outstanding interactions from designs, construct reusable content modules, and ensure code maintainability
- Implement UI design guidelines to ensure that the product's client-side functionality scales
- Examine and improve app utilisation by tracking essential data and proactively resolving issues.
- Capacity to work successfully in a fast-paced setting while bringing in optimal flow for rapidly changing design/technology
