

HTML5 Developer Job Description template

HTML Developer Job Description Template/Brief

We are looking for a CSS/HTML5 developer that is enthusiastic about combining the arts of design and technology. Responsibilities will include turning UI/UX design wireframes into actual code that generates visual parts of the programme. You will work with the UI/UX designer to bridge the gap between the graphical design and technical implementation. You will play an active role on both sides, defining how the software looks and functions.

HTML Developer Job Profile

HTML5 is the most recent and widely used Hypertext Markup Language standard. Although it is not a programming language, it is a vital component of online applications and, in some instances, current desktop and mobile apps. Understanding the HTML5 standard is a critical skill for all front-end web developers.

Reports To

- Tech Lead
- Chief Technology Officer
- Product Manager
- Project Manager
- Developing Team

HTML Developer Responsibilities

- Convert business requirements into technical documents/code
- Share your knowledge with the team to meet project needs
- Use standards, frameworks, and patterns while designing and building components
- Create high-quality code by following best practices in software engineering and testing
- Create software that uses relational and non-relational technologies to process, persist, and disseminate data
- Respond quickly to business requirements and management requests
- Knowledge of Agile Development Life Cycle
- Debug any problems that develop during system or user testing or production, and offer prompt resolution as needed
