

Product Owner Job Description template

Product Owner Job Description Template/Brief

We are hiring a Product Owner to help our scrum team manage, prioritise, and analyse work.

Gathering feature requests, scheduling releases, and managing sprints are all tasks of the Product Owner. You should be able to recognise user demands and collaborate with cross-functional teams to drive product releases to be successful in this job.

Product Owner Job Profile

A product owner collaborates with stakeholders and end-users to picture the project's final direction, usually accomplished through approaches such as early user interaction studies and A/B testing. These sorts of feedback are the responsibility of product owners since they indicate how users engage with the product and which functionalities consumers perceive to be the most significant.

The product owner compares such information to the company goals and then works to optimise the product's value. The product owner creates a vision for a product's purpose and operation, allowing this Scrum team member to describe product features and split those features down into product backlog items.

Reports To

- C Suite
