

# Web Developer Job Description template

## Web Developer Job Description Template/Brief

We're hiring a talented web developer to join our team of forward-thinking designers who are constantly pushing the boundaries of innovation and user experience. The ideal applicant is a brilliant artist with excellent technical knowledge who can work both collaboratively and independently to create, maintain, and update websites for customers in various sectors.

To be successful in this profession, you must be proficient with JavaScript, HTML, CSS, and other online services and software applications. The web developer will have an immediate influence on our brand and our client's brands and a continuing impact on consolidating our industry-wide reputation for exceptional design.

## Web Developer Job Profile

A Web developer specialises in developing World Wide Web or distributed network applications, which typically run protocols such as HTTP from a Web server to a client browser using associated programming languages such as HTML/CSS, C#, Ruby, and PHP, to name a few.

A Web developer is often concerned with the back end or programming side of producing a website or Web application, as opposed to a Web designer, who is exclusively concerned with the aesthetics of a website or application, but many professionals have both skill sets.

## Reports To

- CTO

## Web Developer Responsibilities

- Develop, design, and support all websites and software applications
- Limit exposure to company stakeholders, top management, and other authorities
- Create, write, and modify online content
- Be familiar with user interface (UI), cross-browser interoperability, and general web functionality and standards
